## CYBER SECURITY & INFORMATION PROTECTION ANALYST

Career Pathway

Cyber Security and Information Protection Analysts possess the ability to defend against cyber attacks, protect organizational resources, and prevent future cyber attacks. They are of critical need to organizations of all types, due to their defense of computers, networks, and internal and external channels of communication. On a daily basis, they search for weaknesses within an infrastructure (software, hardware, and networks), and find creative ways to protect it.

### Targeted Credentials

**Note:** (ICT) Individualized Certification Training Program allows the selection of (1) one **additional** credential to study / obtain.

**FOR MORE INFO PLEASE CALL (203) 404-5054**
