DATABASE ADMINISTRATOR

Career Pathway

Targeted Credentials

Note: (ICT) Individualized Certification Training Program allows the selection of (1) one **additional** credential to study / obtain.

A Database Administrator is responsible for the performance, integrity and security of databases. They are also involved in the planning and development of databases, as well as troubleshooting any issues on behalf of users. He or she performs all activities related to maintaining a successful database environment. Responsibilities include designing, implementing, and maintaining the database system, establishing protocols for security, and even train employees in database management and use.
